### 3. Pricing Concerns

BMS : 3 : 000013

The launch of Etopophos represents the introduction of a premium product into a saturated and increasingly price-sensitive market. Since the advent of generic competition, the VePesid® (etoposide) for injection average selling price has declined by over 33 percent (\$69 versus \$109 per 100 mg vial) as of May 1, 1995. Future erosion is expected in light of multiple etoposide approvals expected throughout 1995.

The Etopophos product profile is significantly superior to that of etoposide for injection and is expected to support as much as a 20 percent price premium over VePesid injectable and its generic competitor(s). Market Research indicates, however, that the amount of premium the market will bear diminishes as the generic price erodes. As a result, at anticipated levels of \$ 65.00/100 mg etoposide, Etopophos may support only a 10 to 15 percent premium. Once established, Etopophos may be able take advantage of the compound's superiority and maintain its pricing despite continued erosion of the VePesid/generic market.

In light of the delay in product approval and the expected rapid decline in market price due to multiple generic competitors, a decision may need to be made as to whether the brand is better served by attempting to be price competitive (with a premium) or to establish a higher price for the brand and allow it to fill a niche market where its advantages are best employed. Consideration of the latter option will become increasingly important if Agency approval is significantly delayed.

*How can BMSO best implement a pricing strategy for Etopophos to ensure the brand maintains its introductory price in the face of further declines in market etoposide pricing and still maintain a market share of 30?*

Highly Confidential

VAC MDL 94257

## Physician Pricing Incentives

Currently, physician practices can take advantage of the growing disparity between VePesid's list price (and, subsequently, the Average Wholesale Price [AWP]) and the actual acquisition cost when obtaining reimbursement for etoposide purchases. If the acquisition price of Etopophos is close to the list price, the physicians' financial incentive for selecting the brand is largely diminished.

To provide adequate financial incentive for the use of Etopophos, the following strategies could be employed:

1. Reduction of the VePesid AWP. Under this option, the list price and/or AWP for VePesid would be reduced from its current level to the highest bid price currently in the marketplace.
2. Establish a premium list price for Etopophos (etoposide phosphate) for injection. A list price of \$120.54 would represent a 15% premium over the current VePesid (etoposide) for injection MD direct list price of \$104.82, while \$125.57 would represent 115% of the wholesale list price of \$109.19.

Volume based conversion discounts would be extended to:

- Physician Practices (through BMOTN)
- Hospitals (through GPO Partnerships)
- Non-GPO Hospitals (through competitive bidding)

(d) Price and Trade Terms; Price Changes. BMS retains all rights to control the price and all other terms and conditions with respect to sales to customers of the Products and will establish and maintain such prices, terms and conditions in its sole discretion. In accordance with BMS business practices, BMS shall maintain a published list of prices, terms and other conditions for sales of Products (which may specify prices, terms and conditions by customer group)<sup>Highly Confidential</sup> (the "Price List")

VAC MDL 94261

Because the Joint Venture acts as a sales agent for Bristol-Myers, the Joint Venture does not take title to Bristol-Myers oncology products that it distributes. As a sales agent, the Joint Venture earns a commission on the sale of Bristol-Myers products, but does not record product revenue from these sales. The net revenues of the Joint Venture and the Company consist primarily of revenues from sales of non-Bristol-Myers products; net revenues also include commissions paid to the Joint Venture by Bristol-Myers in connection with the sale of Bristol-Myers oncology products and amounts paid by Bristol-Myers in support of certain Joint Venture marketing programs. Commissions paid by Bristol-Myers net of related expenses have been negligible to date and these commissions are not anticipated to result in significant net revenues to the Company. However, the Company has increased significantly the number of its customers in the oncology physician office market as a result of the Joint Venture. As a result, in the fourth quarter of 1993 and the first quarter of 1994 sales of non-Bristol-Myers products to this market increased relative to pre-Joint Venture levels. There can be no assurance, however, that such sales volume can be achieved in the future. The following table sets forth the total shipments of products for the periods indicated:

	Years Ended December 31,				Quarters Ended March 31,
